

MACDAVIS IKENNA NNADIRINWA

Frontend Software Engineer

React • TypeScript • MVVM • Enterprise SaaS • Workflow Systems

Lagos, Nigeria | 08119204713 | ikennannadirinwa@gmail.com

Portfolio: <https://macdavisnr-portfolio.vercel.app> | GitHub: <https://github.com/Macdavisnr>

PROFESSIONAL SUMMARY

Frontend Software Engineer experienced in building enterprise SaaS applications with React, TypeScript and MVVM architecture. Specialized in specification-driven workflow systems, backend-aligned wire contracts, authentication infrastructure, Redux Toolkit, REST API integration and scalable frontend architecture. Strong collaborator with a track record of delivering production-ready features and consistently high engineering performance.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML5, CSS3

Frontend: React, Vite, Tailwind CSS

Architecture: MVVM, Feature-Based Architecture, Registry Pattern, Service Layer

State: Redux Toolkit, RTK Query, React Query, Context API

Forms: React Hook Form, Zod

APIs: Axios, REST APIs, JWT Authentication, Refresh Token Flow

Tools: Git, GitHub, ESLint, Prettier

PROFESSIONAL EXPERIENCE

Frontend Software Engineer (Intern)

SoftGem Global Technologies

November 2025 – Present

Joined the engineering team by completing a frontend assessment that involved building a responsive résumé website using semantic HTML and CSS before progressing to enterprise React applications serving real business use cases.

Key Contributions

- Architected and migrated the frontend workflow specification layer from static values to backend-aligned bindable wire references using DbValueRef, enabling workflow steps to consume literals, workflow variables, input parameters, and expressions dynamically.
 - Designed reusable conversion utilities (toDbValueRef / fromDbValueRef) that standardized communication between frontend ValueRef objects and backend execution contracts.
 - Refactored database workflow specifications to align with backend execution requirements by restructuring filter handling, renaming backend contract fields, and improving overall specification consistency.
 - Implemented dynamic pagination support across workflow database operations, allowing runtime-driven limit and offset values rather than hardcoded configurations.
 - Built six production-ready security workflow specifications including authentication token generation, token extraction, password hashing, password validation, password generation, and secure random number generation.
 - Developed five reusable utility workflow specifications including return handling, error throwing, exception handling, execution delay, and workflow logging.
 - Designed and implemented a recursive expression builder supporting unlimited nested logical conditions (AND, OR, NOT), enabling users to visually construct complex assertion trees within workflow automation.
 - Developed migration utilities that automatically transformed legacy workflow definitions into the latest backend-compatible structure while maintaining backward compatibility.
 - Enhanced the workflow builder by implementing recursive workflow variable discovery, allowing nested workflow branches to correctly resolve variables defined earlier within execution paths.
 - Improved workflow usability by implementing immediate deletion controls, enhanced save feedback with success/error notifications, and resolving silent validation failures affecting endpoint persistence.
 - Designed and implemented a concurrent JWT refresh token system featuring request queuing, interceptor isolation, refresh token rotation, centralized authentication recovery, and automatic session restoration.
 - Improved enterprise data management by implementing sensitive data masking, redesigning CSV import workflows with preview support, resolving bulk upload persistence issues, and fixing unstable rendering behavior affecting application performance.
 - Collaborated closely with backend engineers to align frontend workflow specifications, DTOs, validation schemas, and execution contracts across multiple enterprise modules.
 - Assisted fellow engineers in debugging frontend issues, troubleshooting implementation challenges, and sharing technical knowledge across the development team.
 - Maintained consistently strong performance across weekly engineering evaluations while contributing production-ready features to enterprise software projects.
-

PROJECTS

Subscription Dashboard App | React, TypeScript

- Built a subscription-based dashboard with authentication and protected routes
- Integrated payment workflow and user management system
- Designed admin panel for approving and managing users

Outsourcing Board Web App | React, TypeScript

- Built a job/outsourcing platform enabling users to post and manage service requests
- Designed dynamic UI components for listing, filtering, and managing tasks
- Implemented state management and reusable components for scalability
- Focused on responsive design and optimized user experience across devices

Onboarding Form System | React, TypeScript

- Developed a multi-step onboarding form with validation and user-friendly UX
- Implemented form state handling and error validation for accurate data collection
- Improved form completion rates through structured UI and feedback handling
- Integrated form submission logic for backend processing

Business Web Applications (Internship Work) | React, TypeScript

FEATURED ENTERPRISE PROJECT — WEVERR

Weverr — Enterprise Workflow Automation Platform

Technologies: React, TypeScript, Redux Toolkit, RTK Query, React Query, Tailwind CSS, MVVM, Axios, React Hook Form, Zod

Contributed to the frontend architecture of a multi-tenant workflow automation platform used to build APIs, manage databases, define workflow logic, and execute business processes through specification-driven workflow execution.

Highlights:

- Led migration of workflow specifications to backend-aligned wire contracts supporting dynamic runtime value binding.
- Developed reusable Function Stack specifications across database, data manipulation, security, and utility modules.
- Enhanced the visual workflow builder with recursive expression editing, nested variable discovery, and improved execution feedback.
- Implemented production authentication infrastructure featuring refresh token rotation, request queuing, and resilient session management.

WORK EXPERIENCE

Customer Support Assistant – New Divine Pharmaceutical Company | Aug 2018 – Aug 2019

- Delivered excellent customer service and maintained accurate sales records
- Assisted with inventory tracking and product management

Classroom Teacher – Presco High School | Jan 2019 – Jan 2021

- Developed structured lesson plans and improved student engagement
- Strengthened communication and organizational skills

ICT Manager – Maclesley International School | May 2021 – Dec 2023

- Managed and maintained computer systems, improving system efficiency
- Provided technical support and trained staff on digital tools
- Supported digital transformation of school processes

Frontend Developer Intern- SoftGem Global Technologies | November 2025 – Present

- Developing and maintaining responsive web applications using React and TypeScript
- Collaborating with designers and backend developers to deliver user-focused solutions
- Building reusable components and improving UI performance
- Participating in real-world product development including HR and retail systems

EDUCATION

B.Sc (Ed) Biology – Alex Ekwueme Federal University | 2019 – 2024

TRAINING

Tech Training & Digital Skills – Aptech, Owerri | 2023 – 2024

Completed courses on React, JavaScript, and modern frontend development – Udemy
(Self-paced)

ADDITIONAL INFORMATION

- Assistant Course Representative
- Volunteer experience demonstrating leadership and teamwork
